EventLake

THE PLATFORM LINE

For security leadership
One platform · one meter

Your platform should stop things, not just tell you about them.

SIEM, XDR, identity, posture, data security, deception and reporting in one system, built on one event model — where the thing that observes is also the thing that enforces.

THE OUTCOME

Fewer decisions reach a human at all

The cheap, certain calls are made in line with the traffic that triggers them. Your team gets the cases that genuinely need judgement.

THE RISK YOU CAN ANSWER FOR

Every alert carries its own evidence

Not a score — the specific observations, in order, with the intervals between them. Retrievable years later, without reconstruction.

THE POSTURE

Evidence is a query, not a project

Retention, consent, erasure and audit trail are part of the event model — so the figure in a board report links to what produced it.

What one platform replaces

six charging bases · six renewals · six forecasts

- SIEM · per GB/day
- EDR · per endpoint
- MDR · per seat
- Attack surface · per asset
- Identity · per user
- Data security · per store

The cost of six products is not six invoices. It is six integration seams, six renewal negotiations, and six versions of what happened.

LICENSED ON

Ingestion

Every app in the line, free.

THE LOOP, IN ONE LINE

THE EDGE

Observes and enforces in one process, with rules held locally — a network partition is not an outage of your controls.

evidence ↑

↓ rules

THE BRAIN

Learns across the estate and compiles what it learns back down to the edge — no redeploy.

BOUNDED ON PURPOSE

- Every automated action declares its blast radius before it runs.
- Irreversible actions wait for a person's approval.
- Approval works out-of-band — a bad enough incident does not remove your ability to respond.
- Your detection content is portable — it leaves with you.

See it against your own estate.

A working session on your telemetry, not a slide deck — bring one incident you were unhappy with and we will walk it end to end.
